

Look Mom and Dad, see what I made!

SEWING

ANOTHER LIFE SKILL that brings with it dexterity, creativity, confidence and a sense of accomplishment.

Knowing how to sew, even the basics does more than just save money. It helps with self confidence in knowing that you can repair that item, rather than throw it out to buy it again. That even though those pants or that dress are too long you can hem them yourself and not have to add the cost to pay someone else to do it.

Sewing teaches manual dexterity in the use of a needle and thread. Cutting has a major role in sewing. If it's cut out right it falls together right. Use of Sewing Machines will be introduced under strict supervision.

With basic skills and a desire, if you can imagine it you can make it.

But most of all it gives a visual since of accomplishment that shows ones growth as they grow.

If your Child already has sewing skills then have them bring in something that they made on their own. These Children will be very welcome and challenged as well.

This program will be the 1st and 3^d Thursday of the month, 3:20 - 4:30 as part of the Elementary Enrichment Care; appropriate charges will apply.

We will start out with those in Grade 2 and up. Depending on response we will add Kindergartners and 1st Graders in November. So please let me know.

Parents, please advise if you are interested in assisting, helpful participation is welcome.

Please complete and return.
